Features and Benefits

Cabins and inventory

Carus Reservations solution provides cruise operators with advanced and innovative reservation management for a simplified, dynamic and enhanced booking process. Our proven and reliable solution is an off-the-shelf application designed to support call center, ecommerce and agent sales.

Your cabin inventory is managed on a per leg basis, with full control of inventory and allocation over multi-leg cruises as well as hop-on-hop-off operations. There is full yield control on the inventory to ensure you are always selling the right space to the right customer at the right price.

Cabin number allocation can be done manually during the booking process or automatically, either at time of booking or before check-in. Different cabin categories can be allocated according to different rules. Restaurants and tables can be pre-assigned similar to cabins and allocated as part of the booking process if you wish.
