Features and Benefits

ePoS Solution

The ePOS solution in Carus Onboard is a point-of-sales module that is suitable for use in shops, bars, restaurants, cafes, as well as casinos, spas, front-desk and any other point of sale.

The ePOS module can run on either POS terminals, tablets or standard PCs – this allows departments without dedicated touchscreen hardware to post sales quickly and efficiently using their regular workstation.

A mobile till solution is also available that can be used on a regular cell phone with either iOS or Android. Waiters can use this to place orders for guests while moving around dining rooms, bars, sundeck or pool areas, allowing the galley and the bar to start preparing the orders without delay.

All transactions will automatically update the stock values onboard in real-time.

ePOS layouts are dynamic and can be customized for each location.

Our Onboard Solution!

About Carus

Carus is totally focused on the passenger shipping industry providing advanced reservations, onboard and port solutions that are constantly evolving to meet the ever-changing operational demands of our clients.

For over a decade Carus has been serving a growing client base which includes operators throughout the Baltic, mainland Europe, the United Kingdom, the United States, Africa and Australia. Carus clients cover every aspect of the passenger vessel industry and operate virtually every type of vessel proving the versatility and flexibility of our reservation and onboard solutions. The Carus systems are tried and tested solutions that provide the 24/7 reliability required of mission critical applications especially when delivered via our managed services.
