Features and Benefits

Group Booking

Our experience in the industry has enabled us to develop key tools to help manage group bookings smoothly and efficiently. For tour operators that need guaranteed space for their travel packages, Carus Reservation provides a full Allocation Management suite that allows them to login to a portal to manage bookings in real-time, safe in the knowledge that their space is secure until the agreed cut-off time when it will be released back for general sale.

For private groups, we provide the tools to manage these through your offices and also via self-service features in the Carus ecommerce solutions that allow customers to manage their name lists and make deposit payments themselves.

Sophisticated business rules that are designed for group booking purposes enable you to tailor group discounts that are appealing to your partners whilst protecting your revenue. For example, giving a free place to the lowest revenue category as opposed to a flat discount off the booking total.

CarRes also supports both net and commissionable rates and provides a set of focused reports to enable you to monitor your group traffic and prepare your crews to receive them.

Our Booking System!

About Carus

Carus is totally focused on the passenger shipping industry providing advanced reservations, onboard and port solutions that are constantly evolving to meet the ever-changing operational demands of our clients.

For over a decade Carus has been serving a growing client base which includes operators throughout the Baltic, mainland Europe, the United Kingdom, the United States, Africa and Australia. Carus clients cover every aspect of the passenger vessel industry and operate virtually every type of vessel proving the versatility and flexibility of our reservation and onboard solutions. The Carus systems are tried and tested solutions that provide the 24/7 reliability required of mission critical applications especially when delivered via our managed services.
